Art Unit: 1711

Claims 4-9 and 12-15 are rejected under 35 U.S.C. 112, second paragraph, as being
indefinite for failing to particularly point out and distinctly claim the subject matter which applicant
regards as the invention.

The language within the independent claims specifying that the film is both impermeable to water and permeable to water vapor is contradictory, since the physical state of the impermeable water has not been set forth. There is no requirement that the impermeable water be in the liquid state.

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 1711

3. Claims 4-9 and 12-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Flesher ('024) or Werenicz et al. ('887) or WO 96/15174, each in view of Tesch ('327).

The primary references disclose the production of water vapor permeable films, but are silent regarding the use of the films as covers for compost heaps. As discussed within applicants' Background of the Invention and Tesch, the use of covers over compost heaps to prevent undue interference from weather conditions has long been known. Furthermore, Tesch discloses that films suitable for use as covers over compost can be tailored or modified to control such conditions as oxygen or air permeability. See column 6, lines 43+. Though Tesch advises, but does not necessarily require, that slits within the film be used to control these conditions (column 4, line 59), the reference is considered to emphasize the concept of the sheet permitting gas exchange and the beneficial properties conveyed by such gas exchange. The position is taken that one of ordinary skill in the art familiar with the advances in gas permeable films, as taught by the primary references, would have fully realized that the film permeabilities of Tesch can be achieved by the use of the permeable films taught by the primary references, without the need for slitting the films. Therefore, the position is further taken, in view of the art recognized need to both protect compost piles from the elements and to control the environment of the compost, that it would have been obvious to utilize gas permeable films, such as those disclosed by the primary references, as protecting covers for compost heaps.

4. Applicants have amended the claims to indicate that the film is water impermeable. While this limitation is somewhat ambiguous, it is noted that the films of the primary references also

Application/Control Number: 09/423.523

Art Unit: 1711

possess the characteristic of being impermeable to liquid water. Therefore, it is not seen that this

limitation distinguishes the instant claims from the prior art. The examiner has also considered

applicants' argument that the references constitute non-analogous art. However, the position is

taken that the primary and secondary references are analogous art in that the respective references

are concerned with the utilization of polymeric materials having gas permeabilities that are suitable

for protection from the elements.

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office

action. Accordingly, THIS ACTION IS MADE FINAL. See MPEP § 706.07(a). Applicant is

reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS

from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the

mailing date of this final action and the advisory action is not mailed until after the end of the

THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the

date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be

calculated from the mailing date of the advisory action. In no event, however, will the statutory

period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication should be directed to R. Sergent at telephone

number (703) 308-2982.

R. Sergent
